- ◆ Vitamin B3 **16 mg**
- ◆ Vitamin B5 **6 mg**

HOW TO USE: 1 tablet a day away from meals.

PACKAGING: 30 blistered tablets inserted in a fold box with leaflet.

IRON BISGLYCINATE

This substance has a great bioavailability and high gastrointestinal tolerability. It promotes the transport of oxygen through the haemoglobin. It helps the development of the embryo nervous system.

FOLIC ACID

This vitamin participates in the synthesis of haemoglobin, of various amino acids (i.e. glutamic acid). It helps to prevent the defects of neural tube and contrasts the negative effects of hyperhomocysteinemia.

VITAMIN C

It promotes the assimilation of iron through its reducing properties, and contributes to preserve the integrity of the amniotic membrane.

B VITAMINS (B2, B3, B5, B6 and B12)

They strengthen the development processes of cells in case of increased demand during pregnancy, lactation and growing age. They contribute to the well-being of pregnant women by limiting the outset of nausea and vomit.
