

SUPPOSITORIES

AXOL[®] Procto

SUPPOSITORIES - SUPPOSITOIRES

A PROTECTIVE, REFRESHING, ANTI-INFLAMMATORY and LUBRICATING ACTION IN PRESENCE OF: INTERNAL HAEMORRHOIDS

**NO ANAESTHETIC
NO CORTISONE**

PRODUCT CLASSIFICATION:

European Medical Device CE Class IIa.

ACTIVE INGREDIENTS:

- Escin
- Menthol
- Vitis vinifera
- Glycosaminoglycan
- Mimosa tenuiflora
- Blueberry
- Glycyrrhetic acid

HOW TO USE:

For internal use. The recommended dose is up to 2 suppositories per day. Remove the protective casing. Introduce the suppository into the rectum, if possible after each evacuation.

PACKAGING:

Blister of 10 suppositories inserted in a fold box with leaflet.

CE Medical device
Class IIa
0425

ESCIN

It acts on the capillaries of the hemorrhoidal veins, by stimulating the circulation of blood. It helps to improve the blood-flow, reducing the oedema and helping hemorrhoids to retract.

MENTHOL

Thanks to its well-known local anesthetic properties, it is very useful against pain caused by hemorrhoids.

VITIS VINIFERA

Plays a protective action at the level of the microcirculation by decreasing the permeability of venous capillaries and by increasing their resistance also in presence of recurrent proctitis.

GLYCOSAMINOGLYCAN

They are covalently linked to proteins, forming complex structures. They have lubricating, connective and protective properties.

MIMOSA TENUIFLORA

It plays a protective action at the level of microcirculation by decreasing the permeability of venous capillaries and by increasing their resistance also in presence of recurrent proctitis.

BLUEBERRY

It has a protective and tonifying action on the veins, thanks to the presence of anthocyanins which inhibit the activity of proteolytic enzymes and hence the degradation of collagens and elastic tissues. Moreover, anthocyanins exert a positive effect on the blood vessel wall of the veins.

GLYCYRRHETIC ACID

It is a triterpenic organic acid extracted from the Licorice plant (*Glycyrrhiza glabra*). It is used as anti-inflammatory and healing agent and gives the product a soothing activity.
