

# Donna-Vein™

ACTIVE GEL

## FOR A REFRESHING AND RELAXING EFFECT ON THE TIRED AND HEAVY LEGS

**CE** Medical device  
Class I  
Directive 93/42/ECC

**PRODUCT CLASSIFICATION:**  
European Medical Device

**ACTIVE INGREDIENTS:**

- ◆ Sodium heparin
- ◆ Menthol
- ◆ Escin
- ◆ Centella
- ◆ Ginkgo Biloba
- ◆ Ruscus
- ◆ Blueberry
- ◆ Ivy

**HOW TO USE:** Apply a sufficient amount of gel on the legs and massage until completely absorbed. It is recommended to use 1 or 2 times a day, preferably morning and evening.

**PACKAGING:** Aluminum tube of 50 ml, inserted in a fold box with a leaflet.

### SODIUM HEPARIN

Sodium heparin has an anticoagulant and anti-inflammatory effect that promote the reabsorption of edema and hematomas and improve local blood fluidity.

### MENTHOL

Thanks to the well-known refreshing and analgesic properties, Menthol gives a feeling of intense and prolonged freshness.

### ESCIN

Escin is a plant compound that is obtained from the mixture of saponins contained in the seeds, bark and leaves of the horse chestnut. It is able to increase the resistance and decrease the permeability of the capillaries anti-edema action.

For these properties, it is useful in the presence of swelling and heaviness in the lower limbs.

It also has anti-inflammatory properties.

### CENTELLA, RUSCUS, IVY AND GINKGO BILOBA

These plants contain various substances, including some flavonoids, which reduce permeability and increase the tone of the vessel wall of the capillaries, making it more elastic and resistant. In addition to these vasoprotective properties, they also have anti-inflammatory and draining activities that help counteract swollen and heavy legs.

### BLUEBERRY

It has a protective and tonifying action on the veins, thanks to the presence of anthocyanins which inhibit the activity of proteolytic enzymes and hence the degradation of collagens and elastic tissues. Moreover, anthocyanins exert a positive effect on the blood vessel wall of the veins.
