

SUPPOSITORIES FOR THE RELIEF OF SYMPTOMS ASSOCIATED WITH HAEMORROIDS AND PROCTITIS

PRODUCT CLASSIFICATION:

European Medical Device.

ACTIVE INGREDIENTS:

- Escin
- Menthol
- Farnesol
- Rosemary oil
- Glycosaminoglycan
- Bisabolol
- Vitamin E
- Glycyrrhetic acid

HOW TO USE:

For internal use: the recommended dose is up to 2 suppositories per day. Remove the protective casing.

Introduce the suppository into the rectum, if possible after each evacuation.

PACKAGING: blister of 6 suppositories inserted in a fold box with leaflet.

Medical device
Class I
Directive 93/42/ECC

ESCIN:

It acts on the capillaries of the hemorrhoidal veins, by stimulating the circulation of blood. It helps to improve the blood-flow, reducing the oedema and helping hemorrhoids to retract.

MENTHOL:

Thanks to its well-known local anesthetic properties, it is very useful against pain caused by hemorrhoids.

FARNESOL, ROSEMARY OIL, BISABOLOL and VITAMIN E:

Rosemary is well known for its anti-inflammatory properties and, together with Farnesol, it has an antibacterial action. Bisabolol has calming, soothing and antibacterial properties. Vitamin E, thanks to its antioxidant activity, protects cell membranes from reactive oxygen species and promotes healing processes.

GLYCOSAMINOGLYCAN:

They are covalently linked to proteins, forming complex structures.

They have lubricating and protective properties.

GLYCYRRHETINIC ACID:

It is a triterpenic organic acid extracted from Licorice plant (*Glycyrrhiza glabra*).

It is used as anti-inflammatory and healing agent and gives the product a soothing activity.
