

Mar-ProstTM

FOOD SUPPLEMENT FOR THE MANAGEMENT OF PROSTATE INFLAMMATION

PRODUCT CLASSIFICATION: Food supplement

ACTIVE INGREDIENTS

- ◆ Maritime Pine 95% OPC 158 mg
- ◆ Bromelain 5000 GDU 200 mg
- ◆ Zinc 10 mg

SCOPE OF USE:

It is useful in the management of inflammatory processes affecting the male urogenital system.

HOW TO USE:

1 tablets daily

PACKAGING:

2 blisters packs of 10 tablets
inserted in a fold box with leaflet.

MARITIME PINE

A hydrosoluble extract is obtained from the bark of the Maritime Pine (*Pinus pinaster* Aiton synonym of *Pinus maritima*), which in 1987 received the international phytochemical designation of Pycnogenol. Pycnogenol consists chemically of a mixture of polyphenols, particularly antioxidant bioflavonoids, of which the most significant are Oligomeric ProanthoCyanidins (OPCs).

Maritime Pine dry extract has anti-inflammatory, antioxidant and anti-edematous properties. These properties are particularly useful in inflammatory edematous states.

BROMELAIN

Bromelain refers to a set of enzymes, endowed with proteolytic activity, extracted from the pulp but especially the stem of pineapple. Classically, Bromelain used in the world of nutritional supplementation is extracted from the stem of this fruit. In addition to its digestive effects, evidently related to the proteolytic activity of these enzymes, Bromelain is also known for several other systemic effects. Bromelain exhibits anti-inflammatory, antioxidant, antiedematous, and immunomodulatory activities. Importantly, the demonstrated pain-reducing effect is due to Bromelain's ability to reduce tissue inflammation and edema, rather than a direct analgesic effect.

ZINC

Zinc has anti-inflammatory and antioxidant properties. It therefore proves useful in combating free radicals and indicated in the treatment of inflammatory states.
