

TO NORMAL BLOOD CALCIUM LEVELS TO THE MAINTENANCE OF NORMAL BONES AND NORMAL TEETH TO THE NORMAL FUNCTION OF THE IMMUNE SYSTEM

PRODUCT CLASSIFICATION:

Food supplement.

ACTIVE INGREDIENTS:

• Vitamin D3 125 mcg (equal to 5000 IU)

INDICATIONS:

Suggested in case of deficiency or increased nutritional needs of this ingredient. Vitamin D contributes to normal blood calcium levels, to the maintenance of normal bones and normal teeth, and to the normal function of immune system.

HOW TO USE:

2 capsules a day, to be swallowed with water, as directed by physician.

PACKAGING:

4 blisters of 15 capsules each, inserted in a fold box with a leaflet.

VITAMIN D3:

This vitamin is essential for the homeostasis of calcium and phosphate, which are in turn needed for the normal mineralization of bones, muscle contraction, nerve conduction, and general cellular function in all cells of the body.

Vitamin D3 contributes to the transformation of the protein Osteocalcin into its active form, essential for the incorporation of calcium into the bone matrix.

Furthermore, Vitamin D3 stimulates the synthesis of various calcium transport proteins.

In fact, low Vitamin D levels have been observed in patients with osteoporosis, distal radius fracture and hip fracture.

It has also anti-inflammatory and immunoregulatory properties and is crucial for the activation of the immune system defenses.

Low Vitamin D levels have been associated with increased susceptibility to infections, diseases and immune-related disorders.
