

[illegible]

TO MAINTAIN NORMAL BLOOD CLOTTING AND HEALTHY BONES

PRODUCT CLASSIFICATION:
Food Supplement

ACTIVE INGREDIENT:

- ◆ Vitamin K2 **180 mcg**

INDICATION: in case of dietary intake or increased need of this nutrient. Vitamin K2 contributes to normal blood clotting and maintaining healthy bones.

HOW TO USE: 1 capsule a day, to be swallowed with water.

PACKAGING: 2 blisters of 15 capsules each, inserted in a fold box with a leaflet.

VITAMIN K2 (Menaquinone-7)

Menaquinone 7 has greater bioavailability than other forms of vitamin K.

Vitamin K2 works in synergy with other fat-soluble vitamins, such as Vitamin D3.

It promotes Osteocalcin, a protein that attracts Calcium in the bones and activates a series of special proteins. One of these is MGP (Matrix GLA Protein) which mobilizes Calcium from soft tissues and arteries, where this mineral can be harmful.

Vitamin K is also a cofactor for specific carboxylase enzymes synthesized in the liver that help to maintain normal blood coagulation through a balance of both procoagulant factors and anticoagulant proteins.
