

GEL CREAM FOR THE TREATMENT OF SCAR TISSUES

CE Medical device
Class I
Directive 93/42/ECC

PRODUCT CLASSIFICATION:
European Medical Device.

ACTIVE INGREDIENTS:

- Onion bulb extract
- Dimethicone
- Allantoin

HOW TO USE: Apply a thin layer of the product 2-3 times a day on clean, dry skin. Gently massage until completely absorbed.

PACKAGING: aluminium tube of 30 ml inserted in a fold box with leaflet.

ONION BULB EXTRACT:

Onion acts very effectively on scars, helping to regenerate damaged skin. This extract helps to improve collagen production in the areas where it is applied, significantly improving the appearance of scars.

Onion extract is quite effective for all hypertrophic and keloid scars (scars caused by surgery or a wound on which excess tissue has become thick and fibrous).

DIMETHICONE:

It is exploited for its low surface tension and its characteristics of water repellency and photostability, which make it suitable for use on the skin. Thanks to its characteristics, when applied to the skin, it causes a barrier effect. It is therefore useful when it is necessary to isolate the skin from external agents. It also makes the skin shiny and smooth.

ALLANTOIN:

Allantoin is an antioxidant and healing substance that contributes to epidermal repair processes.

It has an important skin-repairing action, but it also has moisturizing properties and a certain keratolytic activity.
